

BETTER SOLUTIONS BY DESIGN

Hollister-Whitney Geared Machines

Our 44F OH Flange Mount Geared Traction can fit through some really narrow doorways, but even we've got our limits

The **Hollister-Whitney 44F OH Traction Flange Mount machine is only 28 in. (71.12 cm) wide**, making it the convenient, powerful choice for buildings with narrow doorways.

The **44 F OH** is based on popular #43 and #44 Hollister-Whitney traction designs, featuring tapered roller bearings which provide quiet, smooth running efficiency, and almost maintenance-free, high performance.

Our C-face design permits the motor coupling to be easily demounted and then remounted. This greatly reduces the time needed during modernizations for motor assembly and motor alignment. The **44 F OH** can also be provided

with a 30 in. (76.2 cm) demountable sheave.

Looking for a versatile machine that can get you through tight spots with ease? Then look to the **44 F OH**.
